FOREWORD

This handbook for Nova Scotia has been prepared to serve as a ready reference on agricultural statistics. It has been a joint undertaking of Statistics Canada, Atlantic Office and The Nova Scotia Department of Agriculture and Marketing.

The greater part of the material contained herein has been compiled from Statistics Canada sources. Acknowledgementis made to Agriculture Canada for data which they supplied.

We gratefully acknowledge the contribution made by farmers, processors and others in Nova Scotia's agricultural industry. Without the information supplied by these operators to mailed and enumerative surveys, this book would not be possible. We hope the information contained herein will be useful to the producers, processors, farm organizations, Government Departments and others in their planning and policy deliberations.

Additional or more specific information may be obtained from the following:

Graphical Summary of 1989 Growing Season

For interest's sake, I thought it might be appropriate to give a general overview of the 1989 growing season (May through September). The graphs included in this summary do not tell the whole story about the weather of the last few months. They do, however, give you a pretty good indication how things on the average went. The graphs, which may be slightly misleading, are the May-September precipitation. They show that most stations received close to normal amounts of rain during the growing season which is indeed true. However, the lack of rainfall that we received between mid-July and early September greatly influenced the growing conditions in many areas.

Corn Heat Units for the season ended up above normal as well as above last year's totals for all reporting locations. The same can be said for the accumulation of degree days above 5°C.

Hours of bright sunshine rebounded from last year's low seasonal totals to be above normal at the four reporting stations.

If you would like any specific statistics regarding the 1989 growing season, please contact:
